SUMMARY

Computer Science student and Cornell Tech AI Fellow with experience in Python, machine learning, and backend development. Analyzing 188K+ insurance claims for an ML project predicting claim severity.

EDUCATION

Virginia Commonwealth University | Richmond, VA **Expected Graduation: May 2029**

Bachelor of Science in Computer Science | Concentration in Cybersecurity | Minor in Artificial Intelligence

Dean's List | GPA: 3.53

Relevant Coursework: Data Structures | Discrete Structures | Linear Algebra | Statistics & Probability | Object-Oriented Programming (Java) | Intro to Problem Solving (Python) | Essentials of AI | Computing and Data Ethics

SKILLS

Java, Python, JavaScript, SQL, pandas, NumPy, exploratory data analysis, data validation, scikit-learn, TensorFlow/Keras, preprocessing, feature engineering, model evaluation, LangChain, embeddings, retrieval-augmented generation, Git/GitHub, REST APIs, Flask, SQLite, Linux, AWS, CI/CD

PROJECTS

Allstate Auto Claims Severity ML Project | Break Through Tech AI Studio **August 2026 – Present**

- Analyze 188,318 historical insurance claims to support development of a regression model for predicting claim severity.
- Conduct reproducible data validation and exploratory analysis, checking schema, identifier uniqueness, missing values, duplicates, continuous-variable ranges, and target validity.
- Collaborate with a three-person team using Git/GitHub, documented analysis methods, and independent peer review to maintain reproducible project work.

EXPERIENCE

Break Through Tech AI Program | AI Fellow | Cornell Tech **May 2026 – Present**

- Completed an intensive 9-week Machine Learning Foundations program, coding across the ML lifecycle in Python from data preprocessing and feature engineering through model training, optimization, and evaluation.
- Built and evaluated Logistic Regression, KNN, Decision Tree, and Neural Network models and developed LLM/RAG applications using LangChain, embeddings, vector retrieval, and prompt engineering.

Hive Systems | Cybersecurity Consulting Intern| Richmond, VA **May 2026 – August 2026**

- Developed individualized QR-code functionality for a phishing simulation platform, enabling recipient-level engagement tracking across 600+ recipients.
- Expanded an Auth0 detection ruleset from 8 to 34 rules, translating authentication events into actionable security alerts.

OneCecure | Cyber Software Engineer Intern | Ashburn, VA **October 2025 – April 2026**

- Developed a full-stack application using Python, Flask, SQLite, and JavaScript, implementing backend logic and data-driven interfaces alongside role-based functionality and TOTP authentication.
- Deployed and maintained the application on Linux using systemd and Git-based CI/CD, supporting reliable hosting and automated application updates.

LEADERSHIP AND STUDENT ORGANIZATIONS

Society of Women Engineers | Contact Chair | VCU **April 2026 – Present**

- Communicate key SWE updates to E-Board and chapter members through meetings and weekly newsletters highlighting scholarships, deadlines, conferences, and professional opportunities.

Undergraduate Teaching Assistant | Essentials of AI (CMSC 225) | VCU **August 2026 – Present**

- Grade weekly 1,100+ word discussions for 115 students on AI concepts, providing thoughtful, rubric-based feedback.
