Nevaeh Dickerson

dickersonng@vcu.edu | (571) 528-4221 | https://www.linkedin.com/in/nevaeh-dickerson/

Summary

Computer Science student concentrating in Data Science, with experience preparing datasets, evaluating machine learning models against baselines, and building dashboards that communicate findings for decisions.

Education

Virginia Commonwealth University | Richmond, VA **Expected Graduation: May 2029**

Bachelor of Science in Computer Science | *Concentration in Data Science* | *Minor in Artificial Intelligence*
Dean's List | GPA: 3.53
Relevant Coursework: Data Structures | Discrete Structures | Linear Algebra | Statistics & Probability | Object-Oriented Programming (Java) | Intro to Problem Solving (Python) | Essentials of AI | Computing and Data Ethics

Skills

Python, SQL, pandas, NumPy, scikit-learn, random forest, XGBoost, TensorFlow/Keras, data preparation, data validation, model evaluation, Matplotlib, Seaborn, Kibana, Git/GitHub, Jupyter

Projects

Allstate Auto Claims Severity | Break Through Tech AI Studio **August 2026 – Present**

https://github.com/Break-Through-Tech/Allstate-1D-predicting-auto-claims-severity

- Used an Allstate auto-claims case of 188,318 claims to explore how an insurer could estimate final payout early enough for reserve planning, during the months repairs and legal outcomes take to settle.
- Validated the dataset, passing 18 data checks, and found average claim cost rose 64% from the low to the high range of one input field.
- Trained and evaluated Random Forest and XGBoost models using a 70/15/15 split across 28,248 held-out claims, achieving mean absolute errors of $1,292 and $1,172, respectively, compared with $1,827 for a baseline model.

Experience

Break Through Tech AI Program | AI Fellow **April 2026 – Present**

- Gained exposure to machine learning foundations, including data preparation, feature engineering, training, and evaluation on real datasets.
- Worked with **4** supervised models: logistic regression, k-nearest neighbors, decision trees, and a TensorFlow/Keras neural network.
- Used data visualizations and written notes to review results while practicing exploratory analysis.

Hive Systems | Cybersecurity Consulting Intern **May 2026 – July 2026**

- Led the establishment of baseline log-ingestion tagging and labeling standards, and key event visualizations for failed logins, credential-compromise activity, and system health, as the foundation of the Wazuh SIEM.
- Validated Auth0 and AWS CloudTrail log ingestion for future expansion, and classified Auth0 detection rules into **3** tiers (baseline, signal, and critical) to improve SOC triage.
- Wrote technical implementation guides and operator runbooks to support production rollout and future onboarding.

AI Cybersecurity Startup | Cyber Software Engineer Intern **June 2023 – August 2025**

- Aggregated vulnerability records from **4** sources (NVD, AlienVault, AbuseIPDB, and VirusTotal) with n8n and the OpenAI API to improve telemetry on the kinds of events in our SIEM environment.
- Built Kibana dashboards on Elasticsearch and Logstash data to detect and visualize security risks in production, and triaged the resulting alerts.

Leadership and Student Organizations

Society of Women Engineers | Contact Chair | VCU **April 2026 – Present**

- Brought in $1,000 in club sponsorship from previous employers, funding conference travel for 8 members this year.
- Communicate key SWE updates to E-Board and chapter members through meetings and weekly newsletters highlighting scholarships, deadlines, conferences, and professional opportunities.

Undergraduate Teaching Assistant | Essentials of AI (CMSC 225) | VCU **August 2026 – Present**

- Grade weekly 1,100+ word discussions for 115 students on AI concepts, providing thoughtful, rubric-based feedback.
